

GALAXY CREATION

129

1990 Oct 26

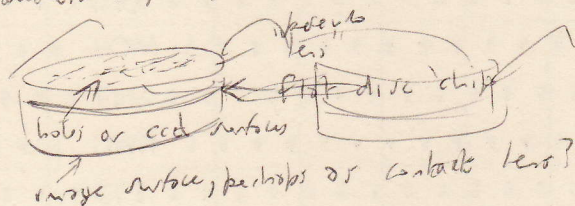

Are galaxies being continuously created ^{at their centers}, and
unwinding like a rotating wheel? If so, the outer
parts should contain mostly older stars, the
inner parts, younger ones. Check.

ELECTRONIC PANTHOUS GLASSES

1990 Oct 25

It might be possible to make an electronic equivalent of Pantouses, based
on light interferometers impinging on CCD sensors bonded by computer chips

= Needs more thought

FREIGHT CAPSULES

1990 Nov 3

- Most goods are relatively small compared to the trucks which carry them. It
might be possible to move the bulk of goods automatically on small electric-railway
capsules, each capsule holding its final destination ('to-digit zip code') electronically
for automatic aggregation and dispatching.
- Capsules could be of the aggregable 'perfect volume' types [V1, V2... or A1, A2 types]
so that any combination could be aggregated. Aggregations could be built up to
any size, eg. interstate routes could be scaled up to twice truck-size aggregates.
'Express' aggregates could have priority over cheaper low-priority ones.
