

hot zone silver balloon boiler, and other solar or alternative technology heaters, it should be possible to get useful energy from a large thermocouple. Also applicable to geothermal power.

Light driven/
Solar clocks

1988 July 14

There should be enough energy derivable from a solar panel to drive a clock, with appropriate energy storage.

URBAN WASTE DISPOSAL

1988 June 27

The best way to handle bulk urban waste disposal could be through a conveyor belt system. This could be partly underground, partly alongside railways etc. Intended for use at Shire locality level - could tie in with parcel network and Unidude system at household & suburb level.

Final destination of conveyor could be a conventional waste site or an artificial island out to sea. The conveyor could travel in a tube on the sea floor.
