

DSH

188

1984 July 4

There is ground for creating a new concept/discipline/ideology to deal with all the interactions between Society and Technology [especially changes in either], and for formulating the laws which drive their ideology. A ~~the~~ possible name would be DSH - Design of Sociodynamic Hologystems.

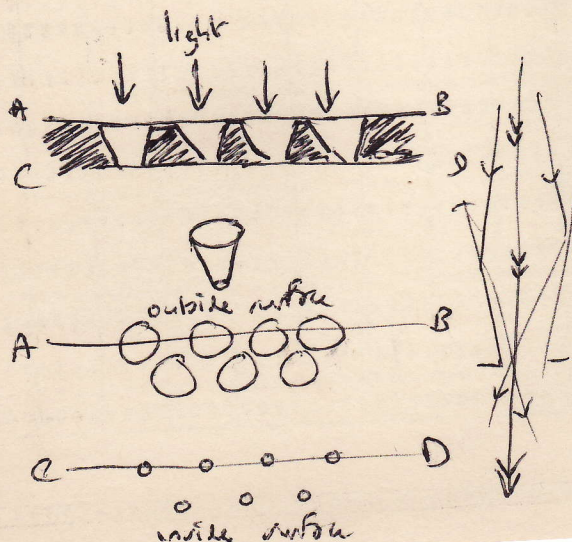

~~SALES TAX ETC~~ 1970s

1984 Jul 23

The 'incentive' notion of taxation [putting aside a proportion of tax on income to an investment account for an individual, a low-interest pre-emptive account for a corporation] could also be extended to sales tax, and even other governmental charges (duties, levies, rates, excises, licenses, etc). This would convert them from negative-incentive to positive-incentive taxes. Producers of taxed items could freely allocate the proceeds to any ~~state~~ account-holder they wished (or they could be restricted to one recipient).

BETTER PIN-HOLE CAMERA

1984 July 23

Instead of conventional pinholes, the glass 'lenses' are made up of either glass fragments of cones or of air ones (latter best). If the inside surface of the cone is polished or reflective the glasses will still admit plenty of light (slope of cone should be such as to give good glancing reflection) but straight-through rays will still give good 'pinhole' focus.
