

PINHOLE COPIER

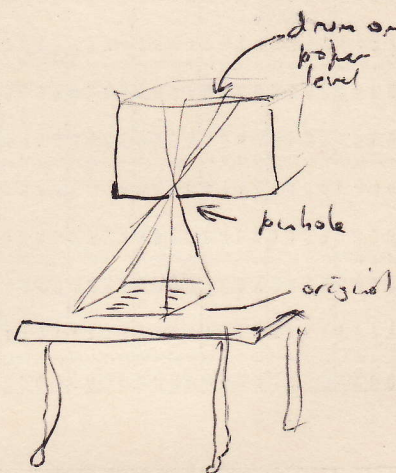

1983

1984 Apr 30

Problems with copier design often are due to limited depth of focus of item being copied. These could be overcome using the pinhole technique. Enlargement/reduction then simply a matter of using appropriate-height exposure medium, and all the advantages of 'copy-face-upward' previously mentioned are available.

- Optics absolutely basic and cheap!

(or insertion of mirror)

BREWER'S REACTIONS OF CARBON FIBRES 1984 May 14

Carbon fibres should have interesting electrical properties - may be able to tie these in with silicon microstructures to produce some interesting devices.

REMOTE CONTROL SECURITY

1984 April 16

Security in banks etc when taking sums of money from rates etc ~~etc~~ could be imposed remotely, either by 'keying the combination' on request from a remote location, or by remote TV supervision, or both. Remote TV supervision is still open to coercion (by threatening local staff) but alarms could be raised remotely without too
