EDDY-CURRENT FLOWS (REVISION)

208A

- Traffic through city blocks, etc, can be routed without any traffic lights, etc, by breaking the streets up into counterrotating 'eddy current' cells.
- Perhaps the same principle can be applied to material sorting, flow of electrons through switching devices, etc. - even psychological partitioning.

FRUIT-FLY KILLER

Article in 'Pomona' 16(1), 1983 which suggests red balls covered with sticky stuff hung in trees to trap flies - some apple pest

- How about a synthetic 'fruit', with sugar exuding, fruit 'smell' liquid, plus powerful insecticide, coming to surface of 'fruit'. Can be made to rotch real like fruits, but no worries over poising etc, unless case with systemic insecticide in other fruit.

ANIMAL ORGAN GRAFTING

Grafting some fruit & nut trees requires the stock and scion both in vigorous active growth, otherwise the graft fails (is rejected). Can there be a similar mechanism in human organ grafting etc? Could it be overcome by, for example, interposing a thin section of (eg) foetal tissue, able to combine with both sections of older tissue?
