EVOLUTION

210

Evolution: the response
to change in environment
≡ change in information
characteristics of surroundings

Being is deliberate imposition of
information sieve on exhibited
characteristics, overrules natural sieve

SPEED TYPING

It should be possible to increase the speed of input on
word-processor type equipment by ~~offering~~ providing 'default' and
'remember' full-in to the ends of words. Examples, typist ~~and~~ inputs
'this_n', terminated by space, accepted normally; 't[↑]', gives most
common word begins with t, plus space, i.e. 'then'; 't[←]' gives
last word used, perhaps 'talk_n', corrected by 'h', gives 'this_n', and
so on.

'OPTICAL COINCIDENCE' FUNCTIONS VIA COMPUTER.

Need an electronic analogue of optical coincidence search -
How about special hardware chips, equivalent of one 'plane'
of bits per "attribute" - load the chips up like selecting
optical coincidence cards. Given electrical path clear through
if some 'document' has all attributes.
