

Replace current bus etc network with a two-part network --

fast long-haul internode carrier, stopping only at node centres (like conventional express bus) + node carriers operating only within node. Node call points scattered within

a node would be served by 1 or more minibuses, called by nearby Doc in nearest call point. Connected by radio/digital network which

would direct minibuses drivers to particular call points. Routing controlled by demand from/to particular points, real-time computer.

## COMPUTER INPUT DEVICES

1981-10-26

Computer input devices should be based directly on the hand (i); instead of keyboards, devices directly recording (es) finger movements should be used. Combined finger movements allow a large range of possibilities - Thousands + 284 fingers give  $2^{10}$  possibilities. Compare finger movements on a musical instrument like the clavichord.

## THERMONUCLEAR ENERGY

1980-5-16

Thermonuclear energy is said to be the equivalent of many atomic bomb energies.

It must be harnessable somehow.
