FLUID FLYWHEEL

223

How about energy storage in a 'flywheel' made up of circulating fluid (liquid, gas, charged gas particles etc)?

Different zones could rotate at different rates. Energy taken from or supplied to flywheel by moving mass between zones.

PLANT IRRIGATION PUMPS

1980-4-17

Breed a ~~plant~~ tree with exceptional taprooting ability (i.e. ability to tap a deep water table) plus exceptional fluid-moving capability. Tap the fluid to irrigate shallower-rooted plants. Coconuts, rubber trees etc have good fluid-delivery capabilities.

1983-2-1

Electrical power conductors

- Use a liquid or gas instead of metal? Transport charged particles (slowly but with less transmission loss)?
