Socialism/communism is nothing more than another religion, without God. It has all the trappings of a religion - fanatical belief in principles above reality, suspicion of splinter sects (ALP/DLP), belief in a "revealed" "right" or "justice" in plain contradiction to facts, "if the Labour Party/God says so then it must be so", <sup>confirmed</sup> <sub>proclaiming</sub> Christian/card-carrying Communist, etc.

Socialism is the substitute for religion in the case of idealists who cannot believe in a God.

Bodily functions can be brought under conscious control, eg. yogas, people willing themselves to death, etc.

Why not decode brain functions for will-to-live bodily repairs, etc, and feed them in artificially during operations, hospitalization, etc, to gain control?
